## 2 Key Audit Findings

### Articulating the Results Chain
Results chains are well articulated and guides the staff in making decisions and are regularly reviewed including systemic changes. In some instances there are minor inconsistencies. Displacement is considered in all sector strategies but is not properly documented.

### Defining Indicators of Change
Indicators are included and specified for each key change in the measurement plan, including universal indicators and indicators that measure systemic changes. Some interventions do not include the universal impact indicators. Sustainability indicators are sometimes insufficient specified.

### Measuring Changes indicators
There are thorough measurement plans and good research practices applied. The intervention measurement plans don’t specify how attribution is measured including the baseline data collection.

### Estimating Attributable Changes
The MRM manual is very comprehensive how to measure attribution and collaborating partners are acknowledged. There is inconsistency in measuring attribution, especially in the older interventions, implying reported impact includes results whereby attribution has not been properly estimated.

### Capturing Wider Changes in the System or Market
Intervention plans mostly capture systemic changes. The attribution of systemic changes is not sufficiently addressed.

### Tracking Programme Costs
Costs are tracked per sector.

### Reporting Results
All results are corrected for overlaps. Costs and impact are reported disaggregated per sector. The system flow of information from intervention plans to the aggregation sheets leaves room of errors. Results are not published.

### Managing the System for Results Measurement
An effective system is in place and use, supported by sufficient resources

Katalyst is constantly improving its measurement system. A major revision of the measurement system took place in July 2010. The more recent Intervention Plans are much better than the older Intervention Plans. Results chains are more thorough, include more key changes and pay more attention to systemic changes. The measurement plan is more detailed, calculation sheets state major assumptions and calculations are better structured and more information is summarised to enable tracking information sources and calculations.

3 Summary of the program and key issues that affect the measurement result system

Katalyst is a multi donor funded, market development program in Bangladesh. Katalyst enables small farmers and enterprises to become more productive and profitable by improving access to business and public benefit services (knowledge, information and inputs. Katalyst also works with government and private partners to improve the enabling environment. This second (5 year) phase started in March 2008.

Katalyst works in 17 sectors\(^1\), categorized in core sectors and cross sectors. The total number of interventions at present is around 160. Katalyst is divided into four Groups: Services (SG), Rural sector group (RSG), Industrial and Rural sectors Group (IRSG), Business Enabling Environment Group (BEEG) and Monitoring and Measuring Results Group (MRM), headed by Group Directors. Within each group, group managers are responsible for intervention clusters and market teams, consisting of 2-3 business consultants supported by one focal person from the MRM group, are responsible for a set of interventions. Measuring results is a shared responsibility between business consultants and MRM focal points. Katalyst also works through co-facilitators that implement interventions on behalf of Katalyst. Measuring results is then a shared responsibility by Katalyst en the co-facilitators.

For each sector, a Comprehensive Sector Strategy is developed, and annually updated, that captures the sector analyses and elaborates on the sector intervention logic. Intervention Plans per intervention include the intervention rational, the results chain, the measurement plan, the calculation sheets, additional information and sources and a cover sheet where changes are recorded during implementation. For every intervention, an Intervention Report is written that reports on changes, results, lessons learned and conclusions. All Intervention Reports feed into the programme reporting system, whereby the MRM section aggregates sector and programme results and management reports achievements in the semi annual report to donors.

The at random selection resulted in 4 cross sectors to be audited: two from Service Group (ICT and Packaging), one from RSG (Irrigation) and one from BEEG (Improving Local Government Services). Core sectors and the IRGS group were thus not audited, yet the MRM system itself is identical for all sectors and groups.

The auditors were provided with all requested documents and selected external researchers, public and private partners to be interviewed. Only one co-facilitator, whose contract had ended, was unavailable for interviews.

\(^1\) Maize, Potato, Vegetable, Jute, Fish, Prawn, Furniture & Crafts, Tourism; Seeds, Fertilizer, Irrigation, Rural Distribution, Packaging, Rural Supply Channels, ICT, Media, ILGS
4 Summary audit process

The audit has reviewed a representative sample of the active portfolio of Katalyst (17 sectors), thus excluding 3 sectors that are no longer part of the active portfolio (access to public water bodies, export promotion and private healthcare).

The sectors were ranked into three categories according to the expenses from the start of this phase till December 2010. At random, two sectors were selected from the highest category, one sector from the middle categories and one sector from the lowest category. The selected sectors are Information and Communicating Technology (ICT), Improving Local Government Services (ILGS), Irrigation (IRR) and Packaging (PKG). From each of these sectors, three interventions were selected, at random, of which an overview is provided in below.

ICT
- RT3: Facilitating the development of Content Service Market
- RT5: Creating awareness among the rural populace about the CIC and its services
- RT8: Supporting Banglalink launch SME helpline

RT2, Facilitating establishment of CIC initiative of GP and RT6, Supporting scaling up of GP-CIC initiative in additional 500 locations & Integrating new services in GP-CIC, were audited where applicable because the selected interventions were feeding into RT2 and RT6.

Interviews were held with Katalyst staff, with the partners Grameenphone and Banglalink, WIN Ltd as well as with Org Quest as external researcher.

ILGS
- IL1: Capacity Building of UZBMOs on Samity Formation and organization management
- IL2: Capacity building of UZBMOs on Advocacy Skills
- PIJS3: Organizational management and Advocacy Skill development for BMOs

IL3 Facilitate formation of Upazila level PPIs for systemic link (for 14 BMOs of P1&2) was partially audited as the selected interventions were intertwined and common internal assessment is done for IL1, IL2 and IL3 together. Interviews were held with Katalyst staff, and with the co-facilitator Intercooperation.

IRR
- IRR 1.1: Introduce and Promote Efficient Water Conveyance Systems
- IRR 1.4: Capacity building of water sellers on improved conveyance systems in Rangpur
- IRR 2.1: Introduce and promote low cost smaller irrigation devices.

IRR 4.1: Capacity building of water sellers on improved conveyance systems in Rangpur was partially audited and interviews were held with Katalyst staff, and with the co-facilitator International Development Enterprises (IDE) and the partner Department of Agricultural Extension (DAE).

PKG
- PKG1: Promoting Improved Bamboo Made packaging for fish/ vegetables/ flower/ fruits
- PKG2: Introducing locally produced plastic made packaging for fish/ vegetables/ fruits
- PKG3: Facilitate development of sustainable capacity building measures for selected packaging product suppliers and service providers

These are all interventions in this sector. Interviews were held with Katalyst staff, and with the co-facilitators Gmark and CDCS.

For the selected interventions, interviews were held with Group Directors, Group Managers, business consultants and MRM focal persons of the respective sectors, as per annex 3.
For all audited sectors, the Comprehensive Sector Strategy (CSS), Scoping Studies, Intervention Concept Notes (ICN) Intervention Plans (IP), Intervention Reports (IR), Sector review minutes and where applicable internal and external Impact Assessments (IA), were consulted.

For Katalyst as a programme, the documents reviewed include the annual reports including the annexes (including financial reports), Cost tracking records, MRM manual as per July 2010, with amendments per May 2010, Aggregation manual and sheets, job descriptions, as well as studies on Gender strategy, Employment as per list in annex 2.
5 Control points

The program scores 172/190 points for the MUST control points and scores 127/160 for the RECOMMENDED control points. All compliance criteria were verified.

</tr>
</thead>
<tbody>
<tr>
<td><strong>Section 1: Articulating the Results Chain</strong></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
| 1.1 A results chain(s) is articulated explicitly for each of the selected interventions. | M | 9 | • Most results chains are thorough, logical, sufficiently detailed and realistic, in most cases linking activities to goal levels. The CSS clearly demonstrate that good research has been undertaken.  
• In the case of ILGS and IRR not all results chains go up to goal level |
| 1.2 Mid and senior level programme staff is familiar with the results chain(s) and use them to guide their activities. | M | 10 | • Business consultants, MRM focal points, group managers and director, co-facilitators and many partners provide evidence that results chains are used in their work |
| 1.3 The results chain(s) are regularly reviewed to reflect changes in the programme strategy, external players and the programme circumstances. | M | 10 | • Result chains are reviewed twice a year and lead to strategic and portfolio decisions |
| 1.4 The review process includes adequate consultation with programme stakeholders | REC | 10 | • Partners and stakeholders are consulted on a regular basis |
| 1.5 The results chain(s) include the results of broader systemic change at key levels. | REC | 8 | • Most of the result chains show copying and crowding effects  
• Some results chains in ILGS and IRR did not address systemic changes in their results chains |
| 1.6 The research and analysis underlying the results chain(s) take into account the risk of displacement. | REC | 8 | • The CSS demonstrate that displacement is unlikely to occur  
• There is no concluding section in the CSS that discusses displacement explicitly |
| **Section 2: Defining Indicators of Change** | | | |
| 2.1 There is at least one relevant indicator associated with each key change described in the results chain(s) | M | 9 | • There are relevant indicators for each key change  
• Not all indicators measure the intended change |
| 2.2 The universal impact indicators are included in the relevant results chain(s) | M | 8 | • Outreach and Income indicators are mostly included. Employment indicators are not provided but the justification in the MRM manual is valid |
Auditors Report DCED StandardResults Measurement Standard 19th July 2011

<table>
<thead>
<tr>
<th>Section</th>
<th>2.3 Indicators incorporate ways to assess the likelihood of lasting impact.</th>
<th>M</th>
<th>9</th>
<th>• In ILGS and some interventions in IRR do not provide these universal indicators and the justification in the MRM manual and relevant IPs is not acceptable</th>
</tr>
</thead>
</table>
|         | 2.4 Anticipated impacts are projected for key indicators, to appropriate dates. | REC | 8 | • Most measurement plans provide sufficient quantitative sustainability indicators  
  • Measuring sustainability often requires more (qualitative) indicators  
  • Projections of key indicators is realistic and reviewed twice per year |
|         | 2.5 Mid and senior level programme staff understand the indicators and how they illustrate programme progress | REC | 10 | • Staff uses the indicators for their daily work and regular reviews |

**Section 3: Measuring Changes in Indicators**

| 3.1 Baseline information on key indicators is collected | M | 7 | • The baseline construction is not reflected in the measurement plan  
  • Baselines are in practice (re-) constructed |
|---------------------------------------------------------|---|---|----------------------------------------------------------------------------------------------------------------------------------|
| 3.2 All research is in line with established good practices (in terms of research design, sampling, quality control etc.) | M | 9 | • Most assessment apply good practices  
  • Sometimes sample selection and field testing is insufficient. When sample sizes are set, the actual pocket survey must also meet these sample sizes |
| 3.3 Qualitative information on changes at various levels of the results chain is gathered. | REC | 7 | • There are very few qualitative indicators in the measurement plan  
  • In practice qualitative indicators are collected and used |
| 3.4 Report changes in indicators that are extrapolated from pilot figure are regularly verified | REC | 10 | • Validation of extrapolation is described in the MRM manual and in ICT this is planned in the near future |

**Section 4: Estimating Attributable Changes**

| 4.1 A clear and appropriate system for estimating attributable changes in all key indicators is in place | M | 6 | • The MRM manual clearly address attribution and in practice most assessments do take attribution into consideration  
  • The attribution strategy is not visible in the measurement plan and in the ICT assessment attribution was not considered |

to the changes claimed by the program are acknowledged | always mentioned in the CSSs  
- They are however not mentioned in the annual reports  

### Section 5: Capturing Wider Changes in the System or Market

5.1 The results of systemic change at key levels in the results chain(s) are assessed.  
**REC 8**  
- With few exceptions all interventions capture systemic changes  
- The MRM guidelines states how attribution should be measured yet in practice this is not always done accordingly  

5.2 Findings on impact include the results of systemic change at key levels  
**REC 10**  
- The reporting system distinguishes between direct and indirect impact  

### Section 6: Tracking Programme Costs

6.1 Costs are tracked annually and cumulatively  
**M 10**  
- The accounting system tracks the costs and allocates overhead according to number of business consultants per sector  

6.2 Costs are allocated by major component of the programme  
**REC 10**  
- The accounting system tracks the cost per sector  

### Section 7: Reporting Results

7.1 The programme documents estimate changes in key indicators due to the programme at least annually  
**M 8**  
- The program estimates impact at key change levels semi annually, including corrections for overlapping results. The reported impact combines projected impact and impact assessed, and projected impacts are corrected when results of impact assessments become available.  

7.2 Reported changes in key indicators are disaggregated by gender  
**M 10**  
- Gender disaggregated data is not reported but justified in the MRM manual. A gender strategy addresses the gender constraints  

7.3 Costs are reported together with impact.  
**M 10**  
- Costs related to impact are presented in the semi annual sector review documents and annual report  

7.4 When the results of systemic change and/or other indirect effects are estimated, change figures are divided into “direct” and “indirect.”  
**REC 10**  
- The impact is divided in direct and indirect impact  
- The annual report provides total impact  

7.5 Results and related costs are reported per component  
**REC 10**  
- Costs related to impact are presented per sector in the semi annual sector review documents  

7.6 Results are published  
**REC 0**  
- The results are not published  

### Section 8: Managing the System for Results Measurement

8.1 A clear and reliable system for measuring key indicators at appropriate  
**M 8**  
- The MRM manual provides clear guidance on measuring indicators  
- The measurement plans do not provide
<table>

6 Summary of areas that require improvements

Articulating the Results Chain
The sequence and linking of results requires attention. The results due too copying and crowding in shall be linked to the correct previous results. If results changes are intertwined, show the links in the results chains (dotted box). The improvement is noted between older and newer interventions. The risk of displacement would be addressed more prominently by including such a section in the Comprehensive Sector Strategy format.

Defining Indicators of Change
Selecting and defining the indicators can be improved: ensure that they measure the expected changes. Behavioural changes are best captured by adding qualitative indicators. Sustainability indicators preferably include ability, satisfaction and profitability indicators. Universal indicators must be included for all interventions. Exceptions can only be made for interventions, and not for entire (cross-) sectors, when results are expected after the closing of the program, and not when the complexity of measuring results itself.

Measuring Changes in Indicators
The intervention measurement plans should be more specific; outlining which attribution method has been chosen and how the baselines will be (re-) constructed. Assumptions should be better documented, including the source and their validation (when and how)

Estimating Attributable Changes
The method to establish attribution (factual or counterfactual, respondents opinion, sectoral comparison, quasi experimental design, or others) should be documented and justified in the measurement plan. Ensure that the acknowledgements of the private sector partners mentioned in the intervention plans are recorded in the annual reports.

Capturing Wider Changes in the System or Market
Ensure that the excellent description of practices in the MRM manual is applied in the measurement in practice. Indirect impact must be measured and it is likely to be less than for direct impact.

Reporting Results
Publish a factsheet showing program costs and disaggregated impact (direct and indirect)

Managing the System for Results Measurement
The MRM manual should specify where and when establishing attribution would be documented.

Annexes

1 Sector specific ratings (spread sheet)
2 Sector specific findings
3 List of documents reviewed
4 List of interviews conducted

2 For example by adding a few rows to the measurement stating the attribution strategy chosen, and why, as well as when and how the baseline will be (re-) constructed.
